

AI for ABM: Move Up One Useful Level

0 Fancy Search

Ask for information

1 Contextual Copilot

Add task context

2 Grounded Workspace

Add company truth

3 Reusable Skill

Encode the process

4 Governed Automation

Run with controls

5 Goal-Driven Agent

Delegate the outcome

THE PROMISE

Pick one repeated ABM job. Make it grounded, inspectable, and reusable. Then move it up exactly one level.

Built around the fictional North Peak AI Security and Alder Manufacturing demonstration.

One ABM Job Across All Six Levels

0	Fancy Search	REQUEST Teach me about Alder.	OUTPUT General facts to sift
1	Contextual Copilot	REQUEST Draft a campaign for this brief.	OUTPUT A useful first draft
2	Grounded Workspace	REQUEST Use our brand, ICP, product, and safety files.	OUTPUT On-brand grounded draft
3	Reusable Skill	REQUEST Build the campaign through this approved process.	OUTPUT Repeatable brief and QA
4	Governed Automation	REQUEST Run weekly, refresh inputs, stop for approval.	OUTPUT Queued draft with audit trail
5	Goal-Driven Agent	REQUEST Create qualified pipeline in this segment.	OUTPUT Agent-selected work and outcomes

The pivotal shift: move from "tell me the answer" to "produce the outcome through this process."

Build the Durable System

LEVEL 2: COMPANY BRAIN

Keep company truth in plain files that can move between models, tools, and jobs.

brand.md Voice, visual rules, proof

messaging.md Narrative and claims

icp.md Firmographic fit

personas.md Jobs and buying needs

products.md Capabilities and limits

LEVEL 3: REUSABLE SKILL

Turn a strong one-time workflow into a visible, testable process the team can trigger.

1

Intake contract

Required inputs and missing-data behavior

2

Source contract

Approved files, MCPs, APIs, and freshness

3

Ordered process

Steps, tools, checkpoints, and escalation

4

Output contract

Exact artifact, structure, and acceptance rules

5

Safety contract

Approval gates, prohibited actions, and logs

The Portable Marketer

Models change. Harnesses change. Company data changes.

Your leverage is the repository you can carry forward: context, skills, workflows, tests, examples, and the history of what changed.

Treat the repository like a tool chest. Build it, maintain it, and make every important process replaceable at the model and platform layer.

Move Up One Level in 30 Days

1 -> 2

Ground one repeated ABM job in company truth.

WEEK 1

Pick the job

Choose one repeated task.

WEEK 2

Collect truth

Brand, ICP, product, proof.

WEEK 3

Add safety

Claims, approvals, stop rules.

WEEK 4

Compare

Score old and grounded output.

2 -> 3

Encode the grounded workflow as a reusable skill.

WEEK 1

Map the process

Inputs, steps, tools, output.

WEEK 2

Write the skill

Make behavior explicit.

WEEK 3

Test edge cases

Missing data and weak signals.

WEEK 4

Pilot with two users

Log errors and revise.

3 -> 4

Add a trigger while keeping review and accountability.

WEEK 1

Choose trigger

Schedule or event.

WEEK 2

Define gates

Draft, review, activate.

WEEK 3

Add logs

Inputs, outputs, decisions.

WEEK 4

Run draft-only

Measure and tighten.

Level 4 to 5 Requires Architecture, Not a Checklist

Agent architecture depends on your systems, risk, permissions, data, and goals. Use a one-to-one working session to design the right boundaries.

Leave With the Starter Kit

IN THE REPOSITORY

- **North Peak company brain** Brand, messaging, ICP, personas, product portfolio, proof, and safety.
- **Context Corpus Builder** Collect and normalize company truth into a reusable corpus.
- **ABM Strategist** Turn grounded account context into an approval-ready campaign brief.
- **Skill templates** Use intake, source, process, output, QA, and safety contracts.
- **Demo and upgrade plans** Rehearse the 15-minute boundary and plan a 30-day level-up.

SKILLS WORTH BORROWING FROM THE GTM COMMUNITY

1. Verify: Hiring Signal Verification by Peter S. Borkovich (T3 synthetic + T4 live read-only). Check evidence before scoring or messaging.
 2. Interpret: Signal Interpreter by Din Arbel (T3 synthetic). Create meaning, confidence, and why-now without routing or writing.
 3. Qualify: Audience ICP Filter by Erwann Lefevre (T3 synthetic). Reconcile Keep, Exclude, and Review. The local suite passed 45 of 45 checks.
 4. Draft: Multichannel Campaign Builder by Erwann Lefevre (T3 conditional synthetic). Use source-backed inputs and human copy QA. Do not send or activate.
- Company Deep Dive by Uriel Knorovich is a T1 static source-hierarchy concept only. Community work is not ForgeX-certified for production use.

THE LIVE BOUNDARY

North Peak context + safety contract + ABM Strategist + approval-ready Alder brief. Explain Level 4, but do not schedule, activate, publish, send, spend, authenticate, or write to a system of record.
